EDUCATION:

The Ohio State University | Columbus, Ohio

Graduating, August 2026

- Honors BS Computer Science and Engineering Major & Business Minor

US Citizen

WORK EXPERIENCE:

Visa **May 2026 - August 2026 (3 months)**
Software Engineer Intern – Cybersecurity *Foster City, CA*

- Built core features for an internal micro segmentation auditing portal allowing engineers to manage network policies for K8s applications.
- Integrated enterprise single sign-on (SSO) to replace local-password login, securing access for hundreds of internal employees.
- Automated discovery of faulty network policies from Kubernetes clusters, eliminating manual data uploads and automating synchronization.
- Connected portal to Visa's configuration management database to allow engineers to automatically see only the apps they own at login.
- Hardened the platform for production with encrypted secrets and audit logging, validated by 60+ unit, integration, and end to end tests.

Citizens Financial Group & College Raptor **May 2025 - May 2026 (1 year)**
Software Engineering Intern – Mobile App Dev / Data Engineering *Columbus, OH*

- Built scalable Android and iOS features with Java, Swift, REST APIs, improving reliability and workflows for 500+ students.
- Developed ASP.NET Core + MySQL backend services with authentication, logging, and validation, securing data for 1,000+ users.
- Trained Python forecasting models with regression and boosting, cutting runtime 90% and improving analytics accuracy.
- Built a Streamlit + AWS (Redshift, Snowflake, SageMaker) platform delivering real-time analytics for \$1.5M+ decisions.

M&T Bank **June 2024 - August 2024 (3 months)**
Software Engineering Intern – Data Engineering *Buffalo, NY*

- Rebuilt a SAS-based credit loss engine using Python + SQL, improving performance, reproducibility, and ETL efficiency.
- Developed a Vue 3 frontend + ASP.NET Core backend to enhance observability and reduce support resolution time.
- Proposed a modern microservices architecture, replacing legacy tooling, driving \$2M+ annual cost savings and improved scalability.

PROJECTS:

GrantPilot: AI Grant Readiness Assistant *FastAPI | Next.js | TypeScript | Claude API | RAG | Postgres | MCP | Playwright*
• Built AI grant eligibility platform for nonprofits with RAG pipeline, deterministic scoring bypasses LLM calls, cut analysis latency by ~60%.
• Shipped auth, PDF reports, and an MCP server for Claude agent workflows, validated across 203 backend and 35 MCP integration tests.

AI Valve Position Detector: TE Connectivity AI Cup *Scikit-learn | Pandas | NumPy | Matplotlib | Parquet | Kalman Filter*
• Developed Kalman filter + residual regression pipeline to estimate valve angle with <0.1° MAE across 10k+ high-frequency IMU samples.
• Engineered IMU-based features and trained Ridge and Random Forest models to correct sensor drift and magnetic distortion.
• Built an end-to-end evaluation pipeline with time-series validation and visualizations, improving robustness for scalable industrial monitoring.

SymphoniConnect: Symphonic Pioneers *React | Firebase | WebRTC | TypeScript*
• Developed a React + Firebase WebRTC platform enabling secure, real-time mentoring sessions and identity-driven collaboration features.
• Added matching and scheduling features with improved UI flows that increased reliability and streamlined communication for 50+ users.

Aro: AI-Guided Social Discovery App *Expo React Native | pgvector | Supabase | Edge Functions | Realtime | EAS | RLS*
• Built intent-based social app with pgvector-ranked Modes, semantic circle formation, scheduled Drops, Realtime chat, and mutual connections.
• Shipped Supabase backend with RLS, block-aware matching, push notifications, live demo, and 177+ validation checks.

SKILLS:

- **Programming Languages:** Python, Java, C++, Go, TypeScript, JavaScript, SQL, Bash
- **Backend & Distributed Systems:** REST APIs, online services, distributed systems, caching, scalable infrastructure, cloud systems
- **Developer Productivity & Reliability:** Automated testing, CI/CD, system reliability, performance optimization, developer tooling
- **Relevant Coursework:** Systems I and II, Distributed Systems, Databases, Data Structures, Algorithms, Computer Architecture

EXTRA-CURRICULAR ACTIVITIES:

Fundamentals of Engineering Honors – Web Development & Construction Team – Team Leader **August 2023 - Present**
• Built a Node.js + Vue full-stack online robotic store platform for 100+ students, wired with MySQL, AWS Lambda, S3 services.
• Led system design, SOLIDWORKS prototyping, and CI/CD integration, connecting hardware and software across projects.
• Taught MATLAB, C/C++, and OOP, emphasizing debugging, unit testing, and system-level problem solving.

Carnatic (South Indian Classical) Flute and Vocal Music - Flautist **August 2009 - Present**
• Commercially playing flute for concerts and performances since 2022.
• Featured performances in Pittsburgh, Cleveland, Columbus, as well as cities in India.
• Awarded Master Title in Vocal by the Brinda Repertory
